Sinshad PS

AI Evaluation & Data Quality | CSE Student | Malayalam + English

Kerala, India • Remote opportunities • sinshadsirajudheenpriv@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Computer Science Engineering student graduating in 2027, seeking entry-level remote AI evaluation, annotation and content-quality work. Built an AI-assisted learning portfolio with synthetic practice tasks and two public-data studies. Interested in careful rubric use, checking evidence, documenting errors and escalating uncertain cases.

SKILLS & TOOLS

Evaluation: Pairwise response ranking, instruction following, factual consistency, rubric design, error taxonomy, safety escalation and search intent

Data quality: Text classification, sentiment and urgency labels, exact entity spans, annotation guidelines, schema checks and review queues

Technical: Python (basic), JSON/CSV, Git/GitHub, Jupyter notebooks, HTML/CSS/JavaScript; tools used in this package: Pillow and python-docx

Analysis: Confusion matrices, precision/recall, macro-F1, pass thresholds, NDCG/MRR and coverage/abstention reporting

SELECTED PORTFOLIO PROJECTS — AI-ASSISTED

BANKING77 Intent Classification & Annotation QA

Public BANKING77 dataset: 10,003 training queries, 3,080 test queries and 77 intents. Training-only parameter selection; 85.88% classifier accuracy and macro-F1 0.8579. Original labels attributed to Casanueva et al. / PolyAI (CC BY 4.0). These are classifier results, not personal annotation accuracy.

LLM Response Evaluation

50 self-contained prompts / 100 synthetic responses; weighted accuracy, instruction-following, helpfulness and clarity rubric. Separate AI scoring pass; 5 disagreements retained for adjudication.

Malayalam–English Evaluation

50 English prompts / 100 Malayalam candidates covering meaning, omission, negation, numbers and register. Unicode/script/digit QA and blank native-review forms; linguistic judgments remain provisional.

Multimodal Visual Evaluation

120 unique rendered images / 240 controlled answer records. Geometry-derived ground truth and a real RGB-pixel baseline; 60 questions evaluated, 60 abstentions documented.

AI Safety & Content Quality

100 safe-to-display scenarios across privacy, bias, hallucination, prompt injection and over-refusal. Context-based policy rubric, heuristic triage comparison and missed-escalation review queue.

Search Relevance Study

30 queries / 120 fictional search results. Label-independent lexical ranking, 0–3 relevance rubric, NDCG@4 0.962 and per-intent error analysis; synthetic scope explicitly documented.

EDUCATION & LANGUAGES

JCT Institutions • Computer Science Engineering • Expected graduation 2027

Malayalam (native, self-reported) • English (professional, self-reported)

Personal portfolio projects built with AI assistance and synthetic/public-source data. Results describe these benchmarks—not personal accuracy, employment performance or human-validated language quality.
